

Laguna

P Flux Cyclone

LAGUNA

Specifications

Motor HP: 3 HP -/ Phase: 1

Voltage: 240V / Hertz: 50

RPM: 2850

Hand Held Remote Control: High Frequency

Real CFM: 1350

Nominal CFM: 2340

Max Static Pressure (inches of water): 11.2

Impeller/Fan Size: 15.5

Inlet Diameters: 8" by 4" x 3 Ports

Drum Capacity: 54 Gal

Octagon drum: Low Pressure Suction

Drum collection bag (Dia. x L): Plastic bag (610 x 950mmL)

Canister Filter type: HEPA

Filtration efficiency: 0.4micron @ 99.92%

Max Static Pressure (inches of water): 11.2

Canister filter lower dust collection: Metal end cap with 4" hookup

Wheels: (4x) 4" Flat Caster

Decibel Reading: 76 d B(A) (@9.8ft)

Machine weight: 159kgs

Assembled Dimensions (L x W x H): 1178x690x2025mm

Features

When lifting the drum into position a connector on the back of drum automatically hooks up to a pipe in cyclone this way creating a low pressure in bottom of the drum, this is designed to hold down plastic bag to avoid it being sucked up into the cone during use, no other cyclone or dust system has such a smart system, it is a vast improvement over last

If you chose to use the p|flux without a bag you can simple shut off the system using a valve offering you speed and flexibility.

Sporting standard black HEPA filtration the p|flux series is filled with innovative details such as:

- LED shows when drum is full
- LED shows when filter needs cleaning
- Swing-away doors sports acoustic foam on the inside to lower noise level.
